JOURNAL OF POWER SOURCES

Subject Index of Volume 60

Acidic surface functional groups
influence of physical properties of activated carbons on characteristics of electric double-layer capacitors, 225
Activated carbon
electric double-layer capacitors with sheet-type polarizable electrodes and application of the capacitors, 213
fabrication of high-power electric double-layer capacitors, 219
electric double-layer capacitor using organic electrolyte, 239
Activated carbon fibers
effect of treatment of activated carbon fiber cloth electrodes with cold plasma upon performance of electric double-layer capacitors, 233
Active carbon
electrochemical modification of active carbon fiber electrode and its application to double-layer capacitor, 249
Aging
reliability of multilayer ceramic capacitors with nickel electrodes, 199
Aluminium
covering anodized aluminum with electropolymerized polypyrrole via manganese oxide layer and application to solid electrolytic capacitor, 157
ethylene carbonate-based organic electrolytes for high performance aluminium electrolytic capacitors, 179
Aluminium electrolytic capacitors
characteristics of aluminium solid electrolytic capacitors using a conducting polymer, 173
Aluminum
chemical stability of γ-butyrolactone-based electrolytes for aluminum electrolytic capacitors, 185

γ-Butyrolactone
chemical stability of γ-butyrolactone-based electrolytes for aluminum electrolytic capacitors, 185

Capacitors
capacitors: operating principles, current market and technical trends, 137
covering anodized aluminum with electropolymerized polypyrrole via manganese oxide layer and application to solid electrolytic capacitor, 157
chemical stability of γ-butyrolactone-based electrolytes for aluminum electrolytic capacitors, 185
effect of the addition of silver compounds during the pyrolysis of manganese nitrate on tantalum anodic oxide film, 193
electric double-layer capacitors with sheet-type polarizable electrodes and application of the capacitors, 213
Capacity enhancement
electrochemical modification of active carbon fiber electrode and its application to double-layer capacitor, 249
Carbon
influence of physical properties of activated carbons on characteristics of electric double-layer capacitors, 225

Chips
development of new series of aluminium solid capacitors with organic semiconductive electrolyte (OS-CON), 165
Cold plasma
effect of treatment of activated carbon fiber cloth electrodes with cold plasma upon performance of electric double-layer capacitors, 233
Conducting polymers
characteristics of aluminium solid electrolytic capacitors using a conducting polymer, 173
Conductive polymers
polyacene capacitors, 207

Degradation
reliability of multilayer ceramic capacitors with nickel electrodes, 199
Dielectric constant
capacitors: operating principles, current market and technical trends, 137
Dielectric loss
capacitors: operating principles, current market and technical trends, 137
Double-layer capacitors
influence of physical properties of activated carbons on characteristics of electric double-layer capacitors, 225
electrochemical modification of active carbon fiber electrode and its application to double-layer capacitor, 249

Electric double layer capacitors
capacitors: operating principles, current market and technical trends, 137
fabrication of high-power electric double-layer capacitors, 219
effect of treatment of activated carbon fiber cloth electrodes with cold plasma upon performance of electric double-layer capacitors, 233
electric double-layer capacitor using organic electrolyte, 239
Electrolytic capacitors
capacitors: operating principles, current market and technical trends, 137
organic solid capacitor with conducting thin films as electrolyte by ion-beam-assisted deposition, 151
development of new series of aluminium solid capacitors with organic semiconductive electrolyte (OS-CON), 165
ethylene carbonate-based organic electrolytes for high performance aluminium electrolytic capacitors, 179
Electrolytic conductivity
ethylene carbonate-based organic electrolytes for high performance aluminium electrolytic capacitors, 179
Electropolymerization
covering anodized aluminum with electropolymerized polypyrrole via manganese oxide layer and application to solid electrolytic capacitor, 157
Energy storage devices
fabrication of high-power electric double-layer capacitors, 219

Elsevier Science S.A.

Evaporated thin films
organic solid capacitor with conducting thin films as electrolyte by ion-beam-assisted deposition, 151

Ion-beam-assisted method
organic solid capacitor with conducting thin films as electrolyte by ion-beam-assisted deposition, 151

Manganese dioxide
effect of the addition of silver compounds during the pyrolysis of manganese nitrate on tantalum anodic oxide film, 193
Manganese oxide
covering anodized aluminum with electropolymerized polypyrrole via manganese oxide layer and application to solid electrolytic capacitor, 157
Market survey
capacitors: operating principles, current market and technical trends, 137
Multilayer ceramic capacitors
reliability of multilayer ceramic capacitors with nickel electrodes, 199

Nickel electrodes
reliability of multilayer ceramic capacitors with nickel electrodes, 199

Organic conducting materials
organic solid capacitor with conducting thin films as electrolyte by ion-beam-assisted deposition, 151
Organic electrolytes
ethylene carbonate-based organic electrolytes for high performance aluminium electrolytic capacitors, 179
chemical stability of γ-butyrolactone-based electrolytes for aluminum electrolytic capacitors, 185
effect of treatment of activated carbon fiber cloth electrodes with cold plasma upon performance of electric double-layer capacitors, 233
electric double-layer capacitor using organic electrolyte, 239
Organic semiconductors
development of new series of aluminium solid capacitors with organic semiconductive electrolyte (OS-CON), 165
Oxidation
electrochemical modification of active carbon fiber electrode and its application to double-layer capacitor, 249
Oxygen content
influence of physical properties of activated carbons on characteristics of electric double-layer capacitors, 225

Polyacene
polyacene capacitors, 207
Polyaniline
characteristics of aluminium solid electrolytic capacitors using a conducting polymer, 173
Polypyrrole
covering anodized aluminum with electropolymerized polypyrrole via manganese oxide layer and application to solid electrolytic capacitor, 157
characteristics of aluminium solid electrolytic capacitors using a conducting polymer, 173
Porous electrodes
fabrication of high-power electric double-layer capacitors, 219

Quaternary phosphonium
electric double-layer capacitor using organic electrolyte, 239

Reliability
reliability of multilayer ceramic capacitors with nickel electrodes, 199

Semiconductors
polyacene capacitors, 207
Sheet-type electrodes
electric double-layer capacitors with sheet-type polarizable electrodes and application of the capacitors, 213
Solid electrolyte
organic solid capacitor with conducting thin films as electrolyte by ion-beam-assisted deposition, 151
characteristics of aluminium solid electrolytic capacitors using a conducting polymer, 173
Solid electrolytic capacitors
capacitors: operating principles, current market and technical trends, 137
Stability
chemical stability of γ-butyrolactone-based electrolytes for aluminum electrolytic capacitors, 185
Supercapacitors
fabrication of high-power electric double-layer capacitors, 219

Tantalum
effect of the addition of silver compounds during the pyrolysis of manganese nitrate on tantalum anodic oxide film, 193
TCNQ
development of new series of aluminium solid capacitors with organic semiconductive electrolyte (OS-CON), 165
TCNQ complex
organic solid capacitor with conducting thin films as electrolyte by ion-beam-assisted deposition, 151
Tetracyanoquinodemethane
development of new series of aluminium solid capacitors with organic semiconductive electrolyte (OS-CON), 165
